

## Radiology Information System (RIS) with PACS

NewCreationIT provides custom software solutions for radiology practices by implementing affordable radiology information systems with the integration of PACS, image feed modalities and the implementation of IHE scenarios. Software solutions can be tailor-made for small radiology practices to radiological departments of any size including hospitals with several locations and workplaces.

Key features will include:

- Patient Scheduling
- Patient Registration
- Workflow Management
- Document Management
- PACS - acquire data from any DICOM and non-DICOM devices.
- PACS Viewer - the viewing platform for PACS, with DICOM image management for reading images and diagnoses.
- Patient Notes
- Billing
- Analyses and statistics for management decisions, resource allocation, goal setting, etc.
- Communication - digital communication for requests, images and reports. Email (Internal Messages and Reminders)
- Document Delivery - for electronic delivery of reports to referring physicians.
- Transcription - an integrated transcription module.
- Portal - immediate access to patient test results by referring physicians
- Multi-Clinic Interoperability
